

Mark Scheme (Results)

October 2021

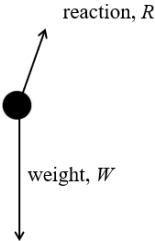

Pearson Edexcel International Advanced
Subsidiary Level in Physics (WPH11)
Paper 01 Mechanics and Materials

Question Number	Answer	Mark
1	<p>B is the correct answer</p> <p>A is incorrect because gradient is velocity, not acceleration</p> <p>C is incorrect because gradient is rate of change of acceleration, not velocity</p> <p>D is incorrect because gradient is rate of change of acceleration, not displacement</p>	1
2	<p>C is the correct answer</p> <p>A is incorrect because magnitudes are equal</p> <p>B is incorrect because magnitudes are equal and directions are opposite</p> <p>D is incorrect because directions are opposite</p>	1
3	<p>C is the correct answer</p> <p>A is incorrect because reducing the extension reduces the stored energy</p> <p>B is incorrect because reducing the extension reduces the stored energy and increasing the force increases the stored energy</p> <p>D is incorrect because increasing the force increases the stored energy</p>	1
4	<p>C is the correct answer</p> <p>A is incorrect because $13.2/\text{answer} = \cos 22.6^\circ$, not $\sin 22.6^\circ$</p> <p>B is incorrect because $13.2/\text{answer} = \cos 22.6^\circ$, not $\sin 22.6^\circ$, and the equation has also been incorrectly transposed.</p> <p>D is incorrect because although $5.5/\text{answer} = \sin 22.6^\circ$ the equation has been incorrectly transposed.</p>	1
5	<p>B is the correct answer</p> <p>A is incorrect because the CW moment of the force could balance the ACW moment of the weight</p> <p>C is incorrect because the CW moment of the force could balance the ACW moment of the weight</p> <p>D is incorrect because the CW moment of the force could balance the ACW moment of the weight</p>	1

6	A is the correct answer B is incorrect because N is in the wrong direction C is incorrect because the wrong diagonal has been used D is incorrect because the wrong diagonal has been used	1
7	A is the correct answer B is incorrect because the distance has not been doubled and the time has not been squared C is incorrect because the distance is in the wrong unit D is incorrect because the distance is in the wrong unit, has not been doubled and the time has not been squared	1
8	B is the correct answer A is incorrect because the factor $9.81 = g / (\text{N kg}^{-1})$ is not needed since it is already included in the weight, $\Delta E_{\text{grav}} = mg\Delta h = W\Delta h$ C is incorrect because dividing by 9.81 removes g from the calculation D is incorrect because dividing by 9.81 removes g and the factor $25 = \Delta h / m$ is missing from the calculation	1
9	A is the correct answer B is incorrect because low viscosity is not a condition C is incorrect because cylindrical object is not a condition D is incorrect because neither cylindrical object nor low viscosity are conditions	1
10	D is the correct answer A is incorrect because mg has the wrong direction B is incorrect because mg and ma have the wrong directions C is incorrect because ma has the wrong direction	1
