June 2022

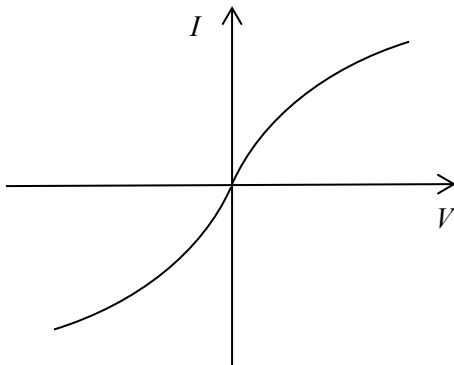

Pearson Edexcel International Advanced
Level In Physics (WPH12) Paper 01
Waves and Electricity

Question Number	Answer	Mark
1	<p>A is the correct answer as, for total internal reflection to take place, the angle of incidence should be greater than the critical angle, when travelling from a substance with a higher refractive index towards a substance with a lower refractive index.</p> <p>B is not the correct answer as total internal reflection cannot take place if the light travels towards a boundary beyond which the refractive index increases. C is not the correct answer as total internal reflection cannot take place if the angle of incidence is less than the critical angle. D is not the correct answer as total internal reflection cannot take place if the angle of incidence is less than the critical angle.</p>	(1)
2	<p>D is the correct answer as wavelength cannot be determined from a graph of displacement against time (only displacement against distance graphs)</p> <p>A is not the correct answer as amplitude is the maximum displacement from the equilibrium position for a wave. B is not the correct answer as the frequency can be calculated from $1/T$ C is not the correct answer as T is the time between two peaks on a displacement against time graph.</p>	(1)
3	<p>B is the correct answer as Power = Intensity \times Area where area = $4\pi r^2$.</p> <p>A is not the correct answer as the area in this equation is not πr^2. C is not the correct answer as Power is not Intensity/Area D is not the correct answer as Power is not Intensity/Area</p>	(1)
4	<p>D is the correct answer as the intensity transmitted by a single polarising filter is independent of the angle of rotation of the filter.</p> <p>A is not the correct answer as the intensity transmitted by a single polarising filter is independent of the angle of rotation of the filter. B is not the correct answer as the intensity transmitted by a single polarising filter is independent of the angle of rotation of the filter. C is not the correct answer as the intensity transmitted by a single polarising filter is independent of the angle of rotation of the filter.</p>	(1)
5	<p>D is the correct answer as, for a first order maximum, $\lambda = d \sin\theta$, where d is $\frac{1}{\text{number of lines per m}}$ and $\sin\theta = \frac{\text{opposite}}{\text{hypotenuse}}$ or $\frac{(0.378)}{(2.035)}$</p> <p>A is not the correct answer as the distance between adjacent slits is not 300,000m. B is not the correct answer as the distance between adjacent slits is not 300,000m. C is not the correct answer as $\sin\theta$ is not $\frac{(0.378)}{(2.000)}$</p>	(1)
6	<p>D is the correct answer as $Q = It$ where t is time in seconds.</p> <p>A is not the correct answer as $Q = It$ where t is time in seconds. B is not the correct answer as $Q = It$ where t is time in seconds. C is not the correct answer as $Q = It$ where t is time in seconds.</p>	(1)

7	<p>A is the correct answer as a photon cannot be partially absorbed by an atom.</p> <p>B is not the correct answer as a photon of 10.2eV would use all of its energy to transfer an electron from the -13.6eV level to the -3.4eV level.</p> <p>C is not the correct answer as an electron of 13.6eV would use 10.2eV to transfer the electron and retain 3.4eV as its own kinetic energy.</p> <p>D is not the correct answer as an electron of 10.2eV could give all its energy to transfer an electron from the -13.6eV level to the -3.4eV level.</p>	(1)
8	<p>B is the correct answer as the potential across the 0.25m section of PQ is 1.0V, and the potential across the 0.25m section of RS is also 1.0V, leaving 2.0V of p.d. to make the sum of the p.d.s equal to the sum of the e.m.f.s on that loop of the circuit passing through the voltmeter.</p> <p>A is not the correct answer as a p.d. of 1.0V would require an e.m.f. of 3.0V</p> <p>C is not the correct answer as a p.d. of 3.0V would require an e.m.f. of 5.0V</p> <p>D is not the correct answer as a p.d. of 4.0V would require an e.m.f. of 6.0V</p>	(1)
9	<p>C is the correct answer as semiconductors such as LDRs release more electrons when energy is absorbed.</p> <p>A is not the correct answer as the number of conduction electrons increases.</p> <p>B is not the correct answer as the increase in lattice vibrations is not related to the reason why more conduction electrons are released.</p> <p>D is not the correct answer as the number of conduction electrons increases.</p>	(1)
10	<p>B is the correct answer as diffraction is a wave property</p> <p>A is not the correct answer as diffraction is not a particle property.</p> <p>C is not the correct answer as diffraction is not a particle property.</p> <p>D is not the correct answer as diffraction is a wave property.</p>	(1)

Question Number	Answer	Mark
11a	<p>Angle of incidence measured from diagram in range 54-56(°) (1)</p> <p>Use of $n_1 \sin \theta_1 = n_2 \sin \theta_2$ with their measured angle of incidence (1)</p> <p>$\theta_2 = 30\text{-}32(^{\circ})$ (1)</p> <p>Normal line drawn correctly at point of incidence (1)</p> <p>Ray refracted towards normal (1)</p> <p><u>Example of calculation</u></p> <p>Angle of incidence measured as 55°</p> <p>$n_1 \sin \theta_1 = n_2 \sin \theta_2$ so $1.00 \times \sin 55^{\circ} = 1.58 \times \sin \theta_2$</p> <p>$\theta_2 = \sin^{-1} \left(\frac{1.00 \times \sin 55^{\circ}}{1.58} \right) = 31.2^{\circ}$</p>	5
11b	<p>Use of $n = c/v$ with $c = 3.00 \times 10^8 \text{ m s}^{-1}$ (1)</p> <p>Use of $\sin C = 1/n$ (1)</p> <p>$C = 41^{\circ}$ (1)</p> <p><u>Example of calculation</u></p> <p>$n = \frac{c}{v} = \frac{3.00 \times 10^8 \text{ m s}^{-1}}{1.96 \times 10^8 \text{ m s}^{-1}} = 1.53$</p> <p>$\sin^{-1}(C) = \frac{1}{1.53}$ so $C = 40.8^{\circ}$</p>	3
