October 2024

Pearson Edexcel International Advanced Level In Physics (WPH15) Paper 01 Thermodynamics, Radiation, Oscillations and Cosmology

Question Number	Answer	Mark
1	A is the only correct answer	1
	B is not the correct answer, as alpha radiation is the least penetrating	
	C is not the correct answer, as beta radiation is only moderately ionising D is not the correct answer, as gamma radiation is the most penetrating	
	D is not the correct answer, as gamma radiation is the most penetrating	
2	A is the only correct answer, as ductile materials deform plastically	1
3	D is the only correct answer	1
	A is not the correct answer as, intensity depends upon luminosity and distance	
	B is not the correct answer as, no information about mass can be deduced	
	C is not the correct answer as, no information about radius can be deduced	
4	D is the only correct answer, as $a \propto -x$	1
5	C is the only correct answer, as $\Delta E_{\text{grav}} = m\Delta V$ and ΔE_{grav} must be negative	1
6	B is the only correct answer, as $T = 2\pi \sqrt{\frac{m}{k}}$ and $f = \frac{1}{T}$	1
7	B is the only correct answer	1
	A is not the correct answer, as for this condition the universe would expand forever	
	C is not the correct answer, as density not mass determines the fate of the universe	
	D is not the correct answer, as density not mass determines the fate of the universe	
8	B is the only correct answer	1
	A is not the correct answer, as this is a red giant star	
	C is not the correct answer, as this is a red giant star	
	D is not the correct answer, as this is white dwarf star	
9	D is the only correct answer, as force is exactly out of phase with the displacement	1
10	B is the only correct answer, as force is proportional to the gradient of the velocity-time graph	1

Question Number	Answer		Mark
11	Use of $\frac{1}{2}m\langle c^2\rangle = \frac{3}{2}kT$	(1)	
	Internal energy = 7300 J	(1)	2
	[Do not credit a calculation of NkT , as the internal energy is not equal to pV].		
	Example of calculation		
	Mean kinetic energy per molecule = $\frac{3}{2}kT$		
	So internal energy = $N \times \frac{3}{2}kT$		
	Internal energy = $1.20 \times 10^{24} \times \frac{3}{2} \times 1.38 \times 10^{-23} \text{ J K}^{-1} \times 293 \text{ K}$		
	Internal energy = 7280 J		
	Total for question 11		2

Question Number	Answer		Mark
12	Use of $\Delta E = mc\Delta\theta$	(1)	
	Use of $\Delta E = mL$	(1)	
	Equates energy changes (energy from copper = energy to increase temperature of tin + energy to melt tin)	(1)	
	$\theta = 1390 \text{ K}$	(1)	4
	Example of calculation Energy transferred from copper $= 10.5 \text{ kg} \times 572 \text{ J kg}^{-1} \text{ K}^{-1} \times (1520 \text{ K} - \theta)$		
	\div Energy transferred from copper = 9.13×10^6 J -6.00×10^3 J K $^{-1}$ θ		
	Energy transferred to tin = $2.7 \text{ kg} \times 214 \text{ J kg}^{-1} \text{ K}^{-1} \times (\theta - 295 \text{ K}) + 2.7 \text{ kg} \times 5.92 \times 10^4 \text{ J kg}^{-1}$		
	Energy transferred to tin = $578 \theta - 1.70 \times 10^5 \text{J} + 1.60 \times 10^5 \text{J}$		
	\therefore Energy transferred to tin = 1.00 \times 10 4 J + 578 J K $^{-1}$ θ		
	Energy transferred from copper equals energy transferred to tin		
	∴ 9.13 × 106 J − 6.00 × 103 J K-1 θ = 1.00 × 104 J + 578 θ		
	$\therefore 9.12 \times 10^6 \mathrm{J} = 6.58 \times 10^3 \mathrm{J} \mathrm{K}^{-1} \theta$		
	$\therefore \theta = \frac{9.12 \times 10^6 \mathrm{J}}{6.58 \times 10^3 \mathrm{J K^{-1}}} = 1386 \mathrm{K}$		
	Total for question 12		4

Question Number	Answer		Mark
13	$T = 2\pi \sqrt{\frac{L}{g}}$ applied to obtain an expression for ω or v	(1)	
	[Allow MP1 if the expression for T is given for both pendulums]		
	$\omega = \frac{2\pi}{T}$ substituted	(1)	
	$v = \omega A \sin \omega t$ used with $\sin \omega t = 1$ [allow r for A]	(1)	
	$E_{\rm k} = \frac{1}{2}mv^2$ applied with $v = \omega A$	(1)	
	$(E_k)_{L/2} = 2(E_k)_L$ so student's suggestion is incorrect Or KE of shorter pendulum is twice KE of longer pendulum so student's suggestion is incorrect	(1)	5
	[Valid methods may involve derived expressions for E_k , e.g. $E_k = \frac{1}{2} m A^2 \frac{g}{l}$] [Valid methods may involve the use of ratios]		
	Total for question 13		5

Question Number	Answer	Mark
14	Calculates volume of bubble Or uses V proportional to d^3)
	Pressure at bottom of lake = atmospheric pressure + pressure due to depth of water (1)	
	Conversion of temperature to kelvin (1)	
	Use of $pV = NkT$ [Allow $\frac{pV}{T} = a$ constant] (1)	
	Diameter = 2.1×10^{-3} m	
	Example of calculation $V_{\rm b} = \frac{4}{3}\pi \left(\frac{1.5 \times 10^{-3} \text{m}}{2}\right)^3 = 1.77 \times 10^{-9} \text{m}^3$	
	$p_{\rm b} = 1.02 \times 10^5 \text{Pa} + 1.56 \times 10^5 \text{Pa} = 2.58 \times 10^5 \text{Pa}$	
	$\frac{1.02 \times 10^5 \text{ Pa} \times V_t}{2.58 \times 10^5 \text{ Pa} \times 1.77 \times 10^{-9} \text{ m}^3} = \frac{(18 + 273) \text{ K}}{(6.0 + 273) \text{ K}}$	
	$\therefore V_{\rm t} = \frac{1.04 \times 4.57 \times 10^{-4} \text{Pa m}^3}{1.02 \times 10^5 \text{Pa}} = 4.67 \times 10^{-9} \text{m}^3$	
	$r = \sqrt[3]{\frac{3 \times 4.67 \times 10^{-9} \text{ m}^3}{4\pi}} = 1.04 \times 10^{-3} \text{ m}$	
	\therefore Diameter = 2 × 1.04 × 10 ⁻³ m = 2.08 × 10 ⁻³ m	
	Total for question 14	5

Question Number	Answer		Mark
15(a)	Substitutes values into $A = 4\pi r^2$	(1)	
	Use of $L = \sigma A T^4$	(1)	
	$L = 9.69 \times 10^{27} \text{ (W)}$	(1)	3
	Example of calculation $L = 5.67 \times 10^{-8} \text{ W m}^{-2} \text{ K}^{-4} \times 4\pi \times (1.18 \times 10^{9} \text{m})^{2} \times (9940 \text{ K})^{4}$ $\therefore L = 9.685 \times 10^{27} \text{ W}$		
15(b)	EITHER		
	Use of $I = \frac{L}{4\pi d^2}$	(1)	
	Ratio of intensities calculated	(1)	
	$\frac{I_S}{I_C} = 3.0$ (ecf for L from (a))	(1)	
	Sirius appears to be 3 times not twice as bright, so the claim is not accurate. Or Ratio of intensities equals $3 \neq 2$, so the claim is not accurate. [Allow a conclusion consistent with a comparison of calculated values for MP4]	(1)	
	Example of calculation $I_S = \frac{(9.69 \times 10^{27} \text{ W})}{4\pi \times (8.15 \times 10^{16} \text{ m})^2} = 1.16 \times 10^{-7} \text{ W m}^{-2}$		
	$I_C = \frac{(4.12 \times 10^{30} \text{ W})}{4\pi \times (2.93 \times 10^{18} \text{ m})^2} = 3.82 \times 10^{-8} \text{ W m}^{-2}$		
	$\frac{I_S}{I_C} = \frac{1.16 \times 10^{-7} \text{ W m}^{-2}}{3.82 \times 10^{-8} \text{ W m}^{-2}} = 3.04$		
	OR		
	Use of $I = \frac{L}{4\pi d^2}$	(1)	4
	TILL	(1)	
	2× I _{Canopus} calculated	(1)	
	$(2 \times I_{\text{Canopus}})$ compared with I_{Sirius} (ecf for L from (a)) [e.g. $7.64 \times 10^{-8} \text{ W m}^{-2} \neq 11.6 \times 10^{-8} \text{ W m}^{-2}$]		
	Intensity of Sirius is not twice the intensity of Canopus, so the claim is not	(1)	
	accurate [Allow a conclusion consistent with a comparison of calculated values for MP4]		
	Total for question 15		7

Question Number	Answer		Mark
16	Add ice to water (in a beaker to bring temperature down to 0°C)	(1)	
	Use thermometer (to measure temperature) [Allow 'sensor used to measure temperature' or 'temperature sensor']	(1)	
		(1)	
	Measure corresponding resistance on ohmmeter [Must be the idea that the reading is taken for a particular temperature]	(1)	
	States method of heating (water) (e.g. (Bunsen) burner, electrical/immersion heater) [Allow water bath]	(1)	
	Plot resistance against temperature [Allow symbols here e.g. a graph of R against θ]		
	Stir the water (to ensure a uniform temperature) Or record temperature/resistance approx every 10°C [+/- 5°C]		
	Or Place the thermometer near to the thermistor (to ensure that the thermistor is at the temperature measured by the thermometer) Or Stop heating and wait before taking readings	(1)	6
	Or Read thermometer at eye level		
	Total for question 16		6

Question Number	Answer		Mark
17(a)(i)	Arcturus/source/star is moving away (from observer) [Allow 'receding' for 'moving away']	(1)	
	So there is a Doppler effect/shift and the wavelength (received) is greater [Accept 'red shift' for 'Doppler shift']	(1)	2
17(a)(ii)	Wavelengths of the two absorption peaks read from graph	(1)	
	Use of $\frac{\Delta \lambda}{\lambda} = \frac{v}{c}$ [must have λ_{Sun} in denominator]	(1)	
	$v = 5.1 \times 10^4 \text{ m s}^{-1} [3.4 \times 10^4 \text{ m s}^{-1} \rightarrow 6.8 \times 10^4 \text{ m s}^{-1}]$ [Do not accept values outside of this range that only round to the limits]	(1)	3
	Example of calculation $\Delta \lambda = (884.0 - 883.85) \times 10^{-9} \text{ m} = 1.5 \times 10^{-10} \text{ m}$		
	$v = \frac{1.5 \times 10^{-10} \text{ m}}{883.85 \times 10^{-9} \text{ m}} \times 3.0 \times 10^8 \text{ m s}^{-1} = 5.09 \times 10^4 \text{ m s}^{-1}$		
17(b)	Red shift of light from (distant) galaxy is determined/measured		
	Or Change in wavelength ($\Delta\lambda$) of light from (distant) galaxy is determined/measured	(1)	
	Velocity/speed (of distant galaxy) is calculated (using Doppler shift equation)	(1)	
	$v = H_0 d$, is used to calculate/determine distance to distant galaxy [Allow reference to Hubble's law rather than the equation]	(1)	3
	Total for question 17		8

Question Number	Answer		Mark
18(a)	Gravitational force equated to centripetal force	(1)	
	Use of $\omega = \frac{2\pi}{T}$ Or Use of $v = \frac{2\pi r}{T}$	(1)	
	Conversion between seconds and days	(1)	
	Ganymede would have made one complete orbit around Jupiter in 7.2 days, so 8 days would have been long enough Or Yes, because 7.2 days < 8 days	(1)	4
	[Must see correct value for orbital time for MP4 to be awarded. Allow orbital time in seconds if 8 days has been converted to 6.91×10^5 s.]		
	$\frac{\text{Example of derivation}}{m\omega^2 r = \frac{GMm}{r^2}}$		
	$\omega = \sqrt{\frac{6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2} \times 1.90 \times 10^{27} \text{ kg}}{(1.07 \times 10^9 \text{ m})^3}} = 1.02 \times 10^{-5} \text{ rad s}^{-1}$		
	$T = \frac{2\pi \text{ rad}}{1.02 \times 10^{-5} \text{ rad s}^{-1}} = 6.18 \times 10^{5} \text{ s}$ $T = \frac{6.18 \times 10^{5} \text{ s}}{8.64 \times 10^{4} \text{ s day}^{-1}} = 7.15 \text{ day}$		
18(b)(i)	Use of $g = \frac{Gm}{r^2}$	(1)	
	$g = 1.42 \text{ (N kg}^{-1})$	(1)	2
	$\frac{\text{Example of calculation}}{g = \frac{6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2} \times 1.48 \times 10^{23} \text{ kg}}{(2.64 \times 10^6 \text{ m})^2} = 1.416 \text{ N kg}^{-1}$		
18(b)(ii)	Reference to $\frac{GM}{r^r}$ with $r_{\text{Ganymede}} = 1.5 \times r_{\text{Moon}}$	(1)	
	Or Reference to $\frac{GM}{r^r}$ with $r_{Moon} = \frac{2}{3} \times r_{Ganymede}$		
	So $M_{\rm M} = \frac{M_{\rm G}}{2.25}$ [Accept $M_{\rm M} = \frac{4}{9} \times M_{\rm G}, M_{\rm M} = 0.44 \times M_{\rm G}, M_{\rm M} = 44\%$ of $M_{\rm G}$]		
	Or $M_{\text{Moon}} = 6.58 \times 10^{22} \text{kg}$	(1)	2
	$[M_{\text{Moon}} < \frac{1}{2} \times M_{\text{Ganymede}} \text{ can gain MP2 if MP1 has been awarded}]$		
	Total for question 18		8

Question Number	Answer		Mark
19(a)(i)	Use of $F = mg$	(1)	
	Use of $\Delta F = k\Delta x$	(1)	
	$k = 45.3 \text{ (N m}^{-1})$	(1)	3
	[If $g = 10 \text{ N kg}^{-1}$ is used, then max 2 marks]		
	Example of calculation $k = \frac{0.55 \text{ kg} \times 9.81 \text{ N kg}^{-1}}{11.9 \times 10^{-2} \text{ m}} = 45.3 \text{ N m}^{-1}$		
19(a)(ii)	Use of $\Delta F = k\Delta x$	(1)	
	Use of $T = 2\pi \sqrt{\frac{m}{k}}$	(1)	
	Use of $f = \frac{1}{T}$	(1)	
	f = 2.1 Hz (ecf value of k from (a)(i))	(1)	4
	$\frac{\text{Example of calculation}}{m = \frac{45.3 \text{ N m}^{-1} \times 5.8 \times 10^{-2} \text{ m}}{9.81 \text{ N kg}^{-1}} = 0.268 \text{ kg}$		
	$T = 2\pi \sqrt{\frac{0.268 \text{ kg}}{45.3 \text{ N m}^{-1}}} = 0.483 \text{ s}$		
	$f = \frac{1}{0.483 \mathrm{s}} = 2.07 \mathrm{Hz}$		
19(b)	The driving/forcing frequency (of the animal) equals the natural frequency (of the spring balance) Or The bag/spring/balance/scale(s) is forced to oscillate at its natural frequency [Accept 'driven at its natural frequency'; accept 'close to its natural frequency']	(1)	
	There is a large transfer of energy (to the bag) Or There is maximum energy transfer (to the bag) Or Resonance occurs	(1)	2
	[Accept 'maximum efficiency of energy transfer']		
	Total for question 19		9

Question Number	Answer		Mark
20(a)(i)	Use of $c = f\lambda$ Use of $\lambda_{\text{max}}T = 2.898 \times 10^{-3} \text{ m K}$ T = 5900 (K)	(1) (1) (1)	3
	$\frac{\text{Example of calculation}}{\lambda = \frac{3.00 \times 10^8 \text{ m s}^{-1}}{6.10 \times 10^{14} \text{ Hz}} = 4.92 \times 10^{-7} \text{ m}}$ $T = \frac{2.898 \times 10^{-3} \text{ m K}}{4.92 \times 10^{-7} \text{ m}} = 5890 \text{ K}$		
20(a)(ii)	Cross where $T \approx 6000$ K and $L = 1$ [The position of the Sun should match with a relative luminosity of about 1 on the vertical axis. The temperature should be in the first half of the 5000 to 10,000 interval (near the 5000 end).] Example of diagram	(1)	1
	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$		
20(a)(iii)	A: diagonal area extending from top left to bottom right of diagram B: area top right of diagram C: area bottom left of diagram [If areas are not marked A, B, C but labelled 'main sequence (stars)', 'red giant (stars)' and 'white dwarf (stars)', marks can be awarded., but do not allow variations.] Example of diagram	(1) (1) (1)	3
	10 ⁶ 10 ⁴ L/L _{Sun} 1 10 -2 10 -4 40,000 20,000 10,000 5,000 2,500 T/K		

This question assesses a student's ability to show a coherent and logically structured answer with linkages and fully-sustained reasoning. Marks are awarded for indicative content and for how the answer is structured and shows lines of reasoning. The following table shows how the marks should be awarded for indicative content.

IC points	IC mark	Max linkage mark	Max final mark
6	4	2	6
5	3	2	5
4	3	1	4
3	2	1	3
2	2	0	2
1	1	0	1
0	0	0	0

The following table shows how the marks should be awarded for structure and lines of reasoning.

	Number of marks awarded for structure of answer and sustained line of reasoning
Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout	2
Answer is partially structured with some linkages and lines of reasoning	1
Answer has no linkages between points and is unstructured	0

Indicative content

- IC1 There must be a (very) high temperature (in the core)
- IC2 To give nuclei/protons large/enough kinetic energy [accept K.E. or E_k]
- IC3 So that nuclei/protons get close enough to fuse
- IC4 There is an electrostatic repulsion between nuclei/protons
- IC5 There must be a (very) high density
- IC6 To give a high/sufficient collision rate to maintain fusion

[IC3: accept reference to close enough for strong force to act

IC4 allow "there is repulsion due to positively charged nuclei"

IC5 allow "a (very) high pressure"

IC6 allow To give a high/sufficient collision rate to maintain high temperature]

Question Number	Answer		Mark
21(a)(i)	Top line correct	(1)	
	Bottom line correct	(1)	2
21(a)(ii)	Conversion between u and kg	(1)	
	Identification of values for Z and (A–Z)	(1)	
	Mass defect calculated	(1)	
	[Calculation must be an attempt to include mass of all nucleons]		
	Use of $\Delta E = c^2 \Delta m$	(1)	
	Binding Energy = 3.4×10^{-10} (J) (dependent upon MP2)	(1)	5
	Example of calculation Mass of $^{241}_{92}$ U = 241.06033 × 1.66 × 10 ⁻²⁷ kg = 4.0016 × 10 ⁻²⁵ kg		
	Mass defect = $(92 \times 1.67 \times 10^{-27} \text{ kg}) + (149 \times 1.68 \times 10^{-27} \text{ kg}) - 4.0016 \times 10^{-25} \text{ kg}$		
	Mass defect = 3.8×10^{-27} kg		
	$\Delta E = c^2 \Delta m = (3.00 \times 10^8 \text{ m s}^{-1})^2 \times 3.8 \times 10^{-27} \text{ kg} = 3.42 \times 10^{-10} \text{ J}$		
21(a)(iii)	Conversion between J and eV	(1)	
	B. E./nucleon = 8.9 MeV (ecf from (a)(ii)) ['Show that' value gives 7.8 MeV]	(1)	2
	Example of calculation B. E. = $\frac{3.42 \times 10^{-10} \text{ J}}{1.6 \times 10^{-19} \text{ J eV}^{-1}} = 2.14 \times 10^9 \text{ eV}$		
	B. E./nucleon = $\frac{2140 \text{ MeV}}{241}$ = 8.88 MeV		

21(b)	Use of $\lambda = \frac{\ln 2}{t_{1/2}}$ Use of $N = N_0 e^{-\lambda t}$ Ratio of N_{241} : N_{242} calculated $\frac{N_{241}}{N_{242}} = 2$ so the deduction is correct (dependent upon MP3) [Ratio may vary a little depending upon number of sig figs retained. E.g. if 2 sf values are used, ratio may be 2.1; there is no sig fig penalty] $\frac{\text{Example of calculation}}{\lambda_{241} = \frac{\ln 2}{40} = 0.0173 \text{ min}^{-1}}$ $\lambda_{242} = \frac{\ln 2}{17} = 0.0408 \text{ min}^{-1}$ $N_{241} = N_0 e^{-0.0173 \times 30} = 0.595 N_0$ $N_{242} = N_0 e^{-0.0408 \times 30} = 0.294 N_0$	(1) (1) (1) (1)	4
			13
