

# Mark Scheme (Results)

January 2025

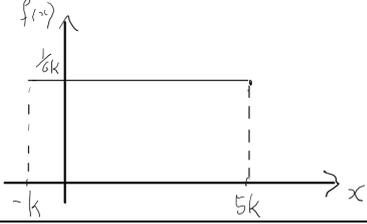

Pearson Edexcel International Advanced Level  
In Statistics 2 (WST02) Paper 01

Question Number	Scheme		Marks
1(a)	$P(X = 2) = \binom{100}{2} \times 0.05^2 \times 0.95^{98} = 0.081181\dots$		M1
	awrt 0.0812		A1
			(2)
(b)	$\lambda = np = 5$		M1
	$P(X = 2) = \frac{e^{-5} \times 5^2}{2!} = 0.084224\dots$		
	awrt 0.0842		A1
		(2)	
(c)	$\frac{"0.084224" - "0.0812"}{"0.0812"} \times 100$ or $\left( \frac{"0.084224"}{"0.0812"} - 1 \right) \times 100$		M1
	awrt 3.7%		A1
			(2)
(d)	Eg Large values of $n$ and small values of $p$		B1
		(1)	
(e)	$P(Y = 6) = 0.1601 = \frac{e^{-\lambda} \times \lambda^6}{6!}$ and $P(Y = 7) = 0.1418 = \frac{e^{-\lambda} \times \lambda^7}{7!}$		M1
	$\frac{0.1418}{0.1601} = \frac{\frac{e^{-\lambda} \times \lambda^7}{7!}}{\frac{e^{-\lambda} \times \lambda^6}{6!}}$		M1
	$\lambda = 7 \times \frac{0.1418}{0.1601}$ oe e.g. $\frac{\text{awrt } 715}{\text{awrt } 115}$ or $7 \times 0.88(5696\dots) \div 0.16(08\dots)$		M1
	$\lambda = 6.19987\dots$		
	awrt $\lambda = 6.2$		A1
		(4)	
<b>Notes</b>			<b>Total 11</b>
(a)	<b>M1</b>	attempt to find $P(X=2)$ using a correct binomial distribution. Either the calculation shown or can be implied by awrt 0.081. Allow ${}^{100}C_2$ or ${}^{100}C_{98}$ or $\frac{100!}{2!98!}$ for $\binom{100}{2}$	
	<b>A1</b>	awrt 0.0812	
(b)	<b>M1</b>	for mean = 5 stated or implied by working	
	<b>A1</b>	awrt 0.0842 or accept 0.0843 if tables used ( $0.1247 - 0.0404 = 0.0843$ ) may be seen in (c)	
(c)	<b>M1</b>	correct method using their answers to (a) and (b) (can be implied by correct answer)	
	<b>A1</b>	awrt 3.7% or accept 3.75%. Condone awrt 3.8% if using 0.0843. Do not accept e.g. 0.037	
(d)	<b>B1</b>	any two suitable comments which refer to $n$ /sample/trials being large/big and $p$ /probability/chance being small/little, specific values not expected but allow values e.g. " $n > 50$ , $p < 0.2$ " but not just " $np < 10$ ". Allow e.g. " $np < 10$ if $n > 50$ ". Ignore non-contradictory comments	
(e)	<b>M1</b>	Two correct simultaneous equations in terms of $\lambda$ .	
	<b>M1</b>	for using ratio of probabilities for their two simultaneous equations (one must have been correct or implied). May be implied by awrt 6.2. Condone errors dealing with their Poisson expressions $\frac{e^{-\lambda} \times \lambda^7}{7!}$ provided they attempt to divide the two given probabilities either way round.	

	<b>M1</b>	<p>for solving their linear equation in <math>\lambda</math> from two simultaneous equations (one must have been correct or implied) via a correct rearrangement. i.e. <math>7 \times \text{their } \frac{0.1418}{0.1601} \left( = \frac{9926}{1601} \text{ or } = \frac{89334}{14409} \right)</math></p> <p>Condone premature rounding/truncation of these numbers in the expression. May be implied by awrt 6.2.</p>
	<b>A1</b>	<p>awrt 6.2 following two correct simultaneous equations or a correct equation in <math>\lambda</math>.</p> <p><b>Do not allow following an invalid method seen</b> e.g. using the equation solver on the individual equations leading to values of 6.20004 and 6.1998 which scores M1M0M0A0</p>

Question Number	Scheme		Marks										
2(i)(a)	$\mu$ is not (a statistic) as it is an <b>unknown</b> (parameter)		B1										
(b)	$\bar{x}$ is (a statistic) as it is <b>based on (known) observations</b> .		B1										
			(2)										
(ii)	Outcomes $Y_1 = 2, Y_2 = 5$ or $Y_1 = 2, Y_2 = 6$ or $Y_1 = 5, Y_2 = 6$ oe only		M1										
	$P(Y_1 < Y_2) = \frac{1}{3} \times \frac{1}{4} + \frac{1}{3} \times \frac{5}{12} + \frac{1}{4} \times \frac{5}{12} \left( = \frac{1}{3} \times \frac{2}{3} + \frac{1}{4} \times \frac{5}{12} \right)$		M1										
	$= \frac{47}{144} = 0.32638\dots$		A1										
			awrt 0.326										
			(3)										
(iii)(a)	Possible ordered outputs (3, 4), (3, 5), (4, 3), (4, 5), (5, 3), (5, 4)		B1										
			(1)										
(b)	{10, 11, 13, 14}		M1, A1										
			(2)										
(c)	Probability of any one outcome = $\frac{1}{6}$ oe		B1										
	<table border="1" style="width: 100%; text-align: center;"> <tr> <td><math>t</math></td> <td>10</td> <td>11</td> <td>13</td> <td>14</td> </tr> <tr> <td><math>P(T = t)</math></td> <td><math>\frac{1}{6}</math></td> <td><math>\frac{1}{3}</math></td> <td><math>\frac{1}{3}</math></td> <td><math>\frac{1}{6}</math></td> </tr> </table>		$t$	10	11	13	14	$P(T = t)$	$\frac{1}{6}$	$\frac{1}{3}$	$\frac{1}{3}$	$\frac{1}{6}$	M1A1
$t$	10	11	13	14									
$P(T = t)$	$\frac{1}{6}$	$\frac{1}{3}$	$\frac{1}{3}$	$\frac{1}{6}$									
			(3)										
<b>Notes</b>			<b>Total 11</b>										
<b>Mark (i)(a) and (i)(b) together</b>													
(i)(a)	<b>B1</b>	correct answer and valid reason that $\mu$ is either (usually) unknown or a population parameter oe											
(i)(b)	<b>B1</b>	correct answer and valid reason suggests one of the following that $\bar{x}$ is <ul style="list-style-type: none"> <li>• based (solely) on observations/calculations/values/information/data/a function oe</li> <li>• contains no unknown population parameters</li> <li>• calculated/measured</li> <li>• numerical property of a sample/derived from a sample</li> </ul> Do not allow "it is a statistic because it is known"											
		SC B1B0 for $\mu$ is not a statistic and $\bar{x}$ is a statistic stated or with insufficient/incorrect reasoning											
(ii)	<b>M1</b>	correct outcomes stated or implied and no extras. Accept (2,5) (2,6) (5,6) or e.g. $2 < 5, 2 < 6, 5 < 6$ May consider all outcomes but indicate the rows which are required. Condone the order the other way round for the pairs i.e. (5,2) (6,2) (6,5)											
	<b>M1</b>	at least two correct products. If $\frac{1}{3} \times \frac{2}{3}$ oe is seen then this is sufficient for M1											
	<b>A1</b>	awrt 0.326 Correct answer 3/3											
<b>Mark (iii)(a), (iii)(b) and (iii)(c) together</b>													
(iii)(a)	<b>B1</b>	Ordered outputs stated or may be seen e.g. in a list/table but not within calculations and no extras. Cannot be implied by their final table in (c). Check by the question for their combinations. Isw if the 6 combinations are stated but they subsequently write 7, 8 and 9 (the sums of the combinations). Do not accept (3, 4) $\times$ 2 (3, 5) $\times$ 2, (5, 4) $\times$ 2											

(iii)(b)	<b>M1</b>	at least 2 correct values from 10, 11, 13 and 14 (accept any list form or within a table as part of their calculations). Condone repeats/extras <i>Condone with replacement at least 2 correct values from 9, 10, 11, 12, 13, 14 and 15</i>															
	<b>A1</b>	all correct and no extras/repeats removed. May be implied by final table in (c)															
(iii)(c)	<b>B1</b>	probability of $\frac{1}{6}$ or equivalent calculation eg $\frac{1}{3} \times \frac{1}{2}$ . May be implied by a correct probability for one of the values in the table.															
	<b>M1</b>	at least 2 correct probabilities or calculations correctly paired with the correct values of $t$ <i>Condone with replacement at least 2 from:</i>															
		<table border="1"> <tr> <td><math>t</math></td> <td>9</td> <td>10</td> <td>11</td> <td>12</td> <td>13</td> <td>14</td> <td>15</td> </tr> <tr> <td><math>P(T = t)</math></td> <td><math>\frac{1}{9}</math></td> <td><math>\frac{1}{9}</math></td> <td><math>\frac{2}{9}</math></td> <td><math>\frac{1}{9}</math></td> <td><math>\frac{2}{9}</math></td> <td><math>\frac{1}{9}</math></td> <td><math>\frac{1}{9}</math></td> </tr> </table>	$t$	9	10	11	12	13	14	15	$P(T = t)$	$\frac{1}{9}$	$\frac{1}{9}$	$\frac{2}{9}$	$\frac{1}{9}$	$\frac{2}{9}$	$\frac{1}{9}$
$t$	9	10	11	12	13	14	15										
$P(T = t)$	$\frac{1}{9}$	$\frac{1}{9}$	$\frac{2}{9}$	$\frac{1}{9}$	$\frac{2}{9}$	$\frac{1}{9}$	$\frac{1}{9}$										
	<b>A1</b>	fully correct. Need not be in a table but must have a correct probability associated with correct value. Condone a different variable to $T$ eg $X$ a correct table with no incorrect working seen implies full marks for (iii)(b) and (iii)(c)															

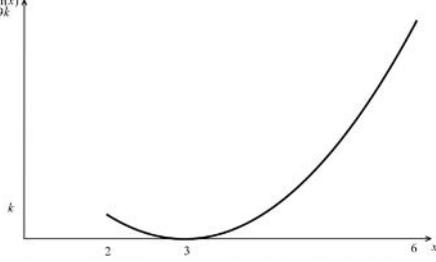

Question Number	Scheme	Marks
3(a)	$\begin{cases} \frac{1}{6k} & -k \leq x \leq 5k \\ 0 & \text{otherwise} \end{cases}$	B1 B1
(2)		
(b)		B1 B1ft
(2)		
(c)	$E(X) = \frac{-k + 5k}{2} = 2k$	B1
(1)		
(d)	$F(x) = \int_{(-k)}^{(x)} \frac{1}{6k} (da)$ $= \left[ \frac{a}{6k} \right]_{a=-k}^{a=x} \Rightarrow F(x) = \frac{x}{6k} + \frac{1}{6} \text{ oe}$ $\begin{cases} 0 & x < -k \\ \frac{x}{6k} + \frac{1}{6} & -k \leq x \leq 5k \\ 1 & x > 5k \end{cases}$	M1 A1 B1 A1
(4)		
(e)	$\text{Var}(X) = \frac{1}{12}(5k - (-k))^2 = 3k^2$ $E(Y) = E(X^2) = \text{Var}(X) + (E(X))^2 = 3k^2 + (2k)^2 = 7k^2$	M1 dM1 A1
(3)		
(f)	$(P(Y < 2k^2) = P(X^2 < 2k^2) =) P(-\sqrt{2}k < X < \sqrt{2}k)$	M1
	$= P(-k < X < \sqrt{2}k)$	M1
	$\left( = \frac{\sqrt{2}k - (-k)}{6k} \right) = \frac{\sqrt{2} + 1}{6} \text{ or exact equivalent}$	A1
(3)		
<b>Total 15</b>		

		Notes
(a)	<b>B1</b>	correct pdf. Condone $\frac{1}{5k+k}$ but not $\frac{1}{5k--k}$ . Must be seen in (a).
	<b>B1</b>	all correct, allow use of < instead of $\leq$ . B0B1 is not possible.
(b)	<b>B1</b>	correct horizontal line / rectangle drawn which must be both sides of the y-axis. Ignore the presence or absence of vertical lines at $-k$ and $5k$
	<b>B1ft</b>	labels correct, $-k$ , $5k$ and " $\frac{1}{6k}$ " ft on their $f(x)$ , provided $f(x)$ is a constant.
(c)	<b>B1</b>	cao (condone $2 \times k$ )
(d)	<b>M1</b>	a correct integral expression for their pdf from (a). Ignore/condone missing limits. May be implied by their integrated expression. Alternatively, attempts the equation of the line between $(-k, 0)$ and $(5k, 1)$
	<b>A1</b>	$\frac{x}{6k} + \frac{1}{6}$ oe A correct expression for $-k$ , $x$ , $5k$ e.g. $\frac{x+k}{6k}$ will imply M1A1
	<b>B1</b>	1 <sup>st</sup> and 3 <sup>rd</sup> lines of cdf correct, allow use of 'otherwise' for one of these lines
	<b>A1</b>	for correct 2nd line of cdf correct: $\frac{x}{6k} + \frac{1}{6}$ oe e.g. $\frac{x+k}{6k}$ <b>and</b> $-k$ , $x$ , $5k$ (oe), allow use of < instead of $\leq$
(e)	<b>M1</b>	correct calculation to find $\text{Var}(X)$ , does not need to be simplified. <b>Alt</b> correct integral for their pdf in (a) (not just the general expression). Condone missing limits.
	<b>dM1</b>	dep on previous M1 for a correct calculation to find $E(Y)$ using their part (c). <b>Alt</b> attempt integration (not wrt $k$ ) for their pdf in (a), which must be a <b>constant</b> i.e. $\frac{x^2}{6k} \rightarrow \dots x^3$ , and correct limits shown or used
	<b>A1</b>	cao
(f)	<b>M1</b>	for an attempt to find the range of possible values for $X$ (inside region) involving $\sqrt{2k}$ or $\sqrt{2k^2}$ or $\sqrt{2k}$ . May be implied by further work. May attempt $1 -$ outside region. You do not need to see $P(\dots)$
	<b>M1</b>	$-k < X < \sqrt{2k}$ seen or implied. e.g. $F(\sqrt{2k})$ , $P(X < \sqrt{2k})$ May attempt $1 - P(\sqrt{2k} < X < 5k)$ do not be concerned with strict or inclusive inequality signs used.
	<b>A1</b>	cao or exact equivalent e.g. $\frac{\sqrt{2}}{6} + \frac{1}{6}$ or $\frac{\sqrt{2k+k}}{6k}$ (note decimal answer awrt 0.402 is M1M1A0) isw after correct answer seen

Question Number	Scheme		Marks
4(i)(a)	$E(X^2) = \int_1^3 x^2 \times \frac{x^3}{20} dx \left( = \int_1^3 \frac{x^5}{20} dx \right)$ $= \left[ \frac{x^6}{120} \right]_1^3$ $= \frac{729}{120} - \frac{1}{120} = \frac{91}{15}$		M1 A1 A1
			(3)
(b)	$\text{Var}(E) = "E(X^2)" - (2.42)^2$ $= \frac{91}{15} - (2.42)^2 = 0.21026\dots$		M1 A1ft
	awrt 0.210		(2)
(ii)(a)	No smaller than Q <sub>3</sub> , $S \sim B(10, 0.75)$ $P(S \dots 7) = 1 - P(S \dots 6)$ $= 1 - 0.22412\dots$ $= 0.77587\dots$ awrt 0.776	Alt: No larger than Q <sub>3</sub> , $L \sim B(10, 0.25)$ $P(L \dots 3)$ $= 0.77587\dots$ (tables give 0.7759) awrt 0.776	B1 M1 A1
			(3)
(b)	$P(S \dots 5) = 1 - P(S \dots 4)$ $= 1 - 0.019727\dots$ $= 0.98027\dots$	$P(L \dots 5)$ $= 0.98027\dots$ (tables give 0.9803) awrt 0.980	M1 A1
			(2)
<b>Notes</b>			<b>Total 10</b>
(i)(a)	<b>M1</b>	correct method stated or implied condone missing limits	
	<b>A1</b>	$\frac{x^6}{120}$ correct <b>and</b> correct limits shown or used (which may be implied by final answer)	
	<b>A1</b>	$\frac{91}{15}$ oe (provided $\frac{x^6}{120}$ oe seen). May be seen in (b).	
(b)	<b>M1</b>	correct calculation ft their $E(X^2)$ from (a)	
	<b>A1ft</b>	awrt 0.210 accept $\frac{1577}{7500}$ Correct answer 2/2. Condone 0.21 with working seen ft if (a) is rounded to 6.07 leading to awrt 0.214	
(ii)(a)	<b>B1</b>	B(10, 0.75) or B(10, 0.25) oe stated in either (ii)(a) or (ii)(b), or implied by a correct probability in (ii)(a) or (ii)(b)	
	<b>M1</b>	correct probability statement for their B(10, $p$ ), where $p = 0.25$ or $p = 0.75$ or allow if Po(10 $p$ ) used. Implied by correct answer.	
	<b>A1</b>	awrt 0.776	
(b)	<b>M1</b>	correct probability statement for their B(10, $p$ ), where $p = 0.25$ or $p = 0.75$ or allow if Po(10 $p$ ) used. Implied by correct answer.	
	<b>A1</b>	awrt 0.980 (condone 0.98 with correct working seen)	

Question Number	Scheme		Marks	
5(a)	No of meteors in 20 mins, $M \sim \text{Po}(5)$ oe		B1	
	(i)	$P(M \dots 6) = 1 - P(M \dots 5)$		
		$= 1 - 0.6160 = 0.3840$	M1	
	(ii)		awrt 0.384	A1
		$P(M \dots 3)$		
		$= 0.2650$		
		awrt 0.265	A1	
			(4)	
(b)	$H_0 : \lambda = 15 \quad H_1 : \lambda > 15$		B1	
			(1)	
(c)	For 30 mins use $X \sim \text{Po}(7.5) \quad P(X \dots 12) = 0.9573$		M1	
	Correct probability statement: $P(X \dots 13) = 0.0427$		A1	
	Critical Region $X \dots 13$		B1	
			(3)	
(d)	Test statistic $x = 12$ is not in critical region oe (so insufficient evidence to reject $H_0$ / insignificant result)		M1	
	No significant evidence that the number of <b>meteors</b> to be seen has <b>increased</b> /no significant evidence to support the <b>astronomy club's claim</b>		A1	
			(2)	
			<b>Total 10</b>	
(a)	<b>B1</b>	Po(5) seen, used or implied by correct answer in (i) or (ii). Sight (to 3sf) of any of 0.265(0) (or 0.765(0), 0.4405 (or 0.5595), 0.616(0) (or 0.384(0)), 0.7622 (or 0.2378) implies this mark.		
(i)	<b>M1</b>	For an attempt at calculating $1 - P(M \dots 5)$ with a Poisson distribution. Imp. by correct answer		
	<b>A1</b>	awrt 0.384 (condone $\frac{48}{125}$ )		
(ii)	<b>A1</b>	awrt 0.265 (independent of the M mark in (i) so B1M0A0A1 is possible)		
(b)	<b>B1</b>	written in terms of $\lambda$ or $\mu$ only (accept 7.5 instead of 15 if consistently used for both)		
(c)	<b>M1</b>	evidence of $\text{Po}(7.5)$ stated or used. Sight of any of 0.0203 or 0.9208 (or 0.0792), 0.9573 (or 0.0427), 0.9784 (or 0.0216), 0.9897 (or 0.0103) to 2sf with probability statement or 3sf on their own implies this mark.		
	<b>A1</b>	correct probability statement $P(X \dots 13)$ oe and awrt 0.0427 oe (awrt 4.27%).		
	<b>B1</b>	correct critical region $X \dots 13$ ( or $X > 12$ ) <b>only</b> , with or without probability given and independent of their (b). Allow a different letter for $X$ but do not allow CR.		
(d)	<b>M1</b>	For a correct comparison fit their CR $X \dots a$ oe (may be written as $P(X \dots a)$ ) where $a \dots 13$ indicating 12 is not in the critical region. e.g. $12 < "13"$ so accept $H_0$		
		Alternatively compares e.g. $P(X \dots 12) = 0.0792 (> 0.05)$ or $P(X \dots 11) = 0.9208 < 0.95$ and indicates do not reject $H_0$ . Do not ignore contradictory non-contextual statements. Allow if they have a 2-tail CR provided upper CR is $P(X \dots a)$ oe where $a \dots 13$		
	<b>A1</b>	Correct conclusion indep. of hypotheses and must be in context. Must mention <b>meteors</b> and <b>increase</b> OR the <b>club's claim</b> oe e.g. insufficient evidence to suggest the number of meteors is greater. Condone e.g. there are not more meteors / the number of meteors has not changed.		

Question Number	Scheme		Marks
6			
(a)	$200(1-p)$		B1
			(1)
(b)	$(z =) \pm \frac{179.5 - 200}{\sqrt{200(1-p)}}$		M1M1 A1ft
	$z = (\pm)1.87$		B1
	$\frac{179.5 - 200}{\sqrt{200(1-p)}} = -1.87$		
	$* \sqrt{200(1-p)} = \frac{-20.5}{-1.87} = 10.962... *$		A1*cso
			(5)
(c)	$1-p = 0.600889... \text{ or}$ $200 - 200p = \frac{75076}{625} (=120.1216) \Rightarrow 200p = \frac{49924}{625} (=79.8784)$		M1
	$p = 0.39911...$		A1
		awrt $p = 0.40$	
			(2)
<b>Notes</b>			<b>Total 8</b>
(a)	<b>B1</b>	$200(1-p)$ oe as variance. Must be seen in (a). isw if they subsequently square root to find sd or multiply out and make errors	
(b)	<b>M1</b>	attempt at continuity correction, sight of 179.5 or 180.5 may be implied by 19.5 or 20.5 imp. by a correct equation.	
	<b>M1</b>	standardisation using their Normal distribution $N(200, (a))$ (Note could use 220.5 for 179.5 and $z = 1.87$ ) implied by a correct equation. Condone use of 180 for this mark. Allow use of $200(1-p)$ in (b) if (a) is incorrect.	
	<b>A1ft</b>	for correct standardisation, ft their variance. Must have scored M1M1.	
	<b>B1</b>	awrt $\pm 1.87$ calculator gives -1.8706	
	<b>A1*</b>	cso for achieving awrt 10.963 following a correct equation i.e. when their standardised expression is equated to $\pm 1.87$ the signs must be compatible otherwise A0* If using a calculator to find the z-value look for awrt 10.959	
		$\frac{179.5 - 200}{\sqrt{200(1-p)}} = -1.87$ oe scores M1M1A1ftB1	
(c)	<b>M1</b>	for rearranging the given answer to part (b) to $1-p =$ awrt 0.6 oe or $200p =$ awrt 80 oe using the correct order of operations. Implied by awrt 0.4. May also rearrange to $p = \frac{10.96^2 - 200}{-200}$ or equivalent which implies this mark.	
	<b>A1</b>	awrt 0.40 , use of 10.96 gives 0.399392

		Notes
(a)	<b>M1</b>	for correct positive quadratic shape in first quadrant ignore labelling with a minimum point on the $x$ -axis. End point on the lhs should be lower than the end point on rhs. Condone poor curvature but not straight lines provided the intention is clear
	<b>A1</b>	fully correct including the coordinates $(2, k)$ (accept $(2, \frac{3}{28})$ ), $(3, 0)$ and $(6, 9k)$ (accept $(6, \frac{27}{28})$ ) shown on sketch. Labels on axes are sufficient.
(b)	<b>B1</b>	mode = 6 only
(c)(i)	<b>M1</b>	correct integral set equal to 1. May be seen or implied in later work. Does not require limits.
	<b>M1</b>	attempt to expand brackets and integrate with at least one $x^{n+1}$ term. Ignore coefficients of terms. May attempt to integrate $(x-3)^2 \rightarrow (x-3)^3$ . Does not require limits
	<b>dM1</b>	dep on both previous M marks for use of correct limits proceeding to a linear equation in $k$ set equal to 1 or implied.
	<b>A1*</b>	cso including correct use of brackets. Must show some evidence of evaluation after substituting in limits before proceeding to $k = \frac{3}{28}$ . e.g. $k \left( \frac{1}{3}(6-3)^3 - \frac{1}{3}(2-3)^3 \right) = 1 \Rightarrow k = \frac{3}{28}$ is A0*
Alt(c)(i)	<b>M1</b>	correct integral set equal to 1. May be seen or implied in later work. Does not require limits.
	<b>M1</b>	attempt to expand brackets and integrate with at least one $x^{n+1}$ term. Ignore coefficients of terms. May attempt to integrate $(x-3)^2 \rightarrow (x-3)^3$ . Does not require limits.
	<b>M1</b>	for substituting $x = 2$ into their integrated expression and set equal to 0 to find $c$ in terms of $k$ $\left( -\frac{26k}{3} \right)$ Then substitutes in $x = 6$ and set equal to 1 achieves a linear equation in $k$ . (or the opposite way round using $x = 6$ and setting equal to 1 to find $c$ and then substituting $x = 2$ and setting equal to 0)
	<b>A1*</b>	cso including correct use of brackets. Must show some evidence of evaluation after substituting in $x = 6$ (or $x = 2$ if the other way round) before proceeding to $k = \frac{3}{28}$ .
(ii)	<b>M1</b>	1 calculation attempted, ie attempting to evaluate 1 definite integral with the correct limits. Implied by awrt 0.747 (or allow 0.746) or awrt 0.754 or awrt 0.253 or awrt 0.246 (allow 0.245)
	<b>dM1</b>	dep on 1 <sup>st</sup> M for 2 calculations attempted. Implied by both correct values to 3sf
	<b>A1</b>	for correct values awrt 0.747 (or allow 0.746) and awrt 0.754 (or awrt 0.253 and awrt 0.246 (allow 0.245)), comparisons and justification of $Q_3$ . Must refer to the upper quartile oe. Not just e.g. $x$ . Do not penalise mislabelling of their functions.
Alt(ii)	<b>M1</b>	1 calculation attempted, ie attempting to evaluate 1 definite integral with the correct limits and subtracting 0.75 or 0.25 as appropriate
	<b>dM1</b>	dep on 1 <sup>st</sup> M for 2 calculations attempted (imp. by correct values rounded to 1sf or truncated)
	<b>A1</b>	for correct values (rounded or truncated), comparisons and justification of $Q_3$ . Must refer to the upper quartile oe. Not just e.g. $x$ . The comparisons with 0 may be done in their working. Do not penalise mislabelling of their functions.
		Note: May substitute 5.71 and 5.72 into $a^3 - 9a^2 + 27a - 47 = 0$ instead proceeding to values of $-0.0974\dots$ and $0.12364\dots$
(ii)	<b>SC</b> <b>M1dM1</b> <b>A0</b>	Integrates, sets equal to 0.75 and solves with a justification of $Q_3$ : $\frac{3}{28} \int_2^a x^2 - 6x + 9 dx = 0.75 \Rightarrow \frac{3}{28} \left[ \frac{1}{3}x^3 - 3x^2 + 9x \right]_2^a = 0.75 \Rightarrow a = 5.714\dots$ $(= a^3 - 9a^2 + 27a - 47 = 0) \Rightarrow a = \text{awrt } 5.714$ $5.71 < 5.714 < 5.72$ therefore $5.71 < Q_3 < 5.72$ oe
